

## **MISSION**

IREC's Mission is to contribute to the sustainable development of society to a greater industrial competitiveness, generating science and building technology around energy related topics.

## **TARGET**

The target of its research activity is to become a centre of excellence and an international benchmark organization in the energy sector, through research, technology development and innovation.

## **ORIENTATION**

The Institut is developing its activity covering energy topic at short medium and large term covering different aspects:

- » Technological research and Technical development; which are focused on collaboration with Industry to create new products and new technical solutions, in the short and medium-term.
- » Applied and technological research, wich is aimed at generating knowledge within groups of the Institute, with a medium or long-term application in mind.

## **ESTRATEGIC GOALS**

- » Generating own specific disruptive scientific and technologic knowledge aimed at providing novelties and innovations to companies, for the development of its strategic medium and long term plans.
- » Empowering knowledge transfer to the market either with direct collaborations with companies, generating and licensing of patents, spin-off's, etc.
- » Promoting local networking in the field of the energy among different institutions center, organizations and universities and enhancing international presence and connection to promote scientific ideas that boost the activity on energy as well as energy related industry.
