

General regulation applicable to the testing of floating wind prototypes on the R&D&i platform of Marine Energies of Catalonia, PLEMCAT (update, March 2024)

The PLEMCAT Commission informs that the concretion of the terms and conditions of the contract to be formalized between IREC and the companies of the awarded prototypes of a test area and a position in the PLEMCAT Platform, which must be validated in advance by this committee before signing, is temporarily postponed until further notice, which also entails the postponement until further notice of the date of 9 May 2024 scheduled for the signing of contracts with the successful bidders of the prototypes, as provided for in paragraph 7 "Formalization of the contract" of the regulation.

This update is motivated by the lack of approval of the budgets of the Generalitat de Catalunya for 2024 that co-finance the PLEMCAT project and that open a new scenario, without affecting the processing of the administrative permits required for PLEMCAT which are being carried out at the current stage of development of the PLEMCAT Platform.

This update of the regulation, which has been approved by the PLEMCAT Commission, will enter into force the day after its approval and will be published on the IREC PLEMCAT website.
